The magnitude of the torque applied by the brake is _____ N.m (round off to one decimal place).

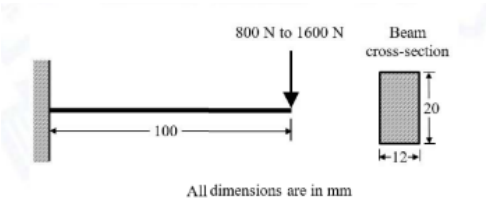
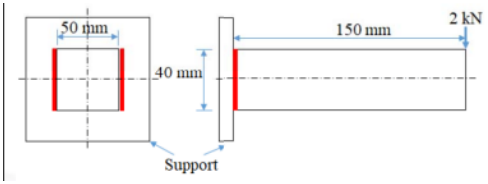
54) A machine part in the form of cantilever beam is subjected to fluctuating load as shown in the figure. The load varies from 800 N to 1600 N. The modified endurance, yield and ultimate strengths of the material are 200 MPa, 500 MPa and 600 MPa, respectively. The factor of safety of the beam using modified Goodman criterion is



_____ (round off to one decimal place).

(GATE ME 2021)

55) A cantilever beam of rectangular cross-section is welded to a support by means of two fillet welds as shown in figure. A vertical load of 2 kN acts at free end of the beam. Considering that the allowable shear stress in weld is 60 N/mm^2, the minimum size



(leg) of the weld required is _____ mm (round off to one decimal place).
